best non-MM arm: median paired $\Delta\text{ACL}_{\text{spur}}$ vs minorminer (%)
non-MM
better

frontier: minorminer 0-for-all (letter = arm that embeds) every arm fails (60 s) $p^*(n)$: template-beats-MM crossover

cell letter = best of the three §4.1 families: T template (constructive) · C CLMM (clique-seeded search) · A attraction (alt-search)
cell value = median paired $\Delta\text{ACL}_{\text{spur}}$ % on both-succeed pairs · blank = unsampled · ≥ 260 column: all sampled cells $n = 260-600$ fail on every arm
